#### EDUCATION

Jan 2012 - Present

**Ph.D., Computer Science**, NYU Tandon School of Engineering, Brooklyn – USA.

Advisor: Juliana Freire, Ph.D.

Jan 2007 - Dec 2011

B.E., Computer and Information Engineering, Federal University of Rio de Janeiro,

Rio de Janeiro – Brazil. Advisor: Marta Mattoso, D.Sc.

Aug 2010 - Dec 2010

**One-Semester Exchange Program**, *University of Central Florida*, *Orlando – USA*. Scholarship granted by the Brazilian government.

## Research Interests

Data Management  $\circ$  Data Mining  $\circ$  Large-Scale Data Analytics Provenance Management and Analytics  $\circ$  Reproducibility  $\circ$  Data Visualization

## Research Experience

Jan 2012 - Present

## Research Assistant

NYU Tandon School of Engineering, Brooklyn - USA

Supervisor: Juliana Freire

May 2016 - Aug 2016

## **Summer Research Intern**

New York Structured Data Research Group Google Research, New York City – USA Supervisors: Flip Korn and Cong Yu

May 2015 - Aug 2015

#### **Summer Research Intern**

New York Structured Data Research Group Google Research, New York City – USA Supervisors: Flip Korn and Cong Yu

Jun 2012 - Jan 2015

## **DataONE Working Group Member**

Scientific Workflows and Provenance Working Group

Jun 2013 - Aug 2013

#### **Summer Research Intern**

 $IBM\ T.\ J.\ Watson\ Research\ Center,\ Yorktown\ Heights-USA$ 

Supervisors: Jérôme Siméon and Martin Hirzel

Jan 2009 - Feb 2009 Re

#### Research Intern

University of Utah, Salt Lake City – USA Supervisors: Juliana Freire and Cláudio T. Silva

Aug 2007 - Aug 2010

#### Research Assistant

Supervisor: Marta Mattoso

## Research Projects

Aug 2014 - Present

## **Urban Data Management and Analytics**

NYU Tandon School of Engineering, Brooklyn - USA

Description: Discovering relationships between spatio-temporal urban datasets can lead to many insights and help understand how the city behaves. Given the sheer number and size of the data sets, and the diverse spatial and temporal scales at which the data is available, this task presents computational challenges on all fronts, from indexing and querying to analyzing the relationships. Also, it is non-trivial to differentiate between meaningful and spurious relationships. This project takes a first step towards addressing these challenges and proposing a solution that is scalable and effective at identifying potentially meaningful relationships.

Jan 2012 - Present

## Reproducibility in Science

NYU Tandon School of Engineering, Brooklyn - USA

Description: While reproducibility is a core component of the scientific process, science falls far short of reproducible results. Most computational experiments are specified only informally in papers, where experimental results are briefly described in figure captions; the code that produced the results is seldom available; and configuration parameters change results in unforeseen ways. This project is focused on developing a suite of tools and infrastructure that supports the process of sharing, testing, and re-using scientific experiments and results. In particular, the goal is to assist researchers in streamlining their research process to make their data interoperable and reproducible. ReproZip and noWorkflow are examples of outcomes of the project.

Jul 2009 - Aug 2010

## Management of Large-Scale Scientific Experiments

Federal University of Rio de Janeiro, Rio de Janeiro - Brazil

Description: Many different scientific areas, including deep-sea oil exploitation and bioinformatics, require simulating large-scale experiments. These simulations must be designed efficiently to avoid the overconsumption of computational resources, as this can become incredibly expensive. In this project, the focus is on building tools to design scientific workflows for such simulations, from its conception to its execution and provenance analysis. The use of provenance data is key in this project: by analyzing ongoing and past executions, previous results can be re-used, thus avoiding expensive, redundant computations.

Aug 2007 - Jul 2009

#### **Data Provenance in Scientific Experiments**

Federal University of Rio de Janeiro, Rio de Janeiro - Brazil

Description: As the amount of data becomes massive and the nature of the scientific workflows becomes more heterogeneous, with data and tasks located in a distributed manner, the need for integrating provenance from the different experiment steps becomes more evident. The goal of this project is to propose efficient solutions, developed in scientific workflow systems, to store and analyze such provenance data, while integrating the different pieces into a single queryable store.

## AWARDS AND HONORS

#### Honorable Mention Best Demonstration - SIGMOD 2017

Querying and Exploring Polygamous Relationships in Urban Spatio-Temporal Data Sets 2017

### Award Most Reproducible Paper - SIGMOD 2017

Data Polygamy: The Many-Many Relationships among Urban Spatio-Temporal Data Sets 2017

#### Award Student Travel Award - SIGMOD 2017

2017

#### Award Pearl Brownstein Doctoral Research Award - NYU Tandon

Doctoral research that shows the greatest promise. 2016

## 2<sup>nd</sup> Place Programming Contest - SIGMOD 2014

Together with Tuan-Anh Hoang-Vu, Kien Pham, and Huy T. Vo. 2014

#### Award Deborah Rosenthal, MD Award - NYU Tandon

Outstanding performance on the Ph.D. qualifying examination. 2014

#### Honorable Mention A3P Special Honor - Federal University of Rio de Janeiro

Outstanding performance achieved at the Federal University of Rio de Janeiro, given by the Alumni Association of the Polytechnic School (A3P). 2013

Honorable Mention

## Magna Cum Laude Honor – Federal University of Rio de Janeiro

Outstanding performance achieved in Computer and Information Engineering. 2013

Honorable Mention

#### Research Honor - Federal University of Rio de Janeiro

Given by the Academic Deliberative Council of Graduate Department of Engineering (COPPE). 2010

## Award Best Poster - XXIV Brazilian Symposium on Databases

Development of Explicit Control Structures for SWfMS VisTrails (in Portuguese) 2009

## Honorable Mention

## Best Presentation - Federal University of Rio de Janeiro

Top 10 presentations among more than 500 presentations, during the XXXI Conference on Young Research Assistant.

2010

## Freely-Available Software Systems

## ReproZip

https://www.reprozip.org/

ReproZip is a tool that automatically captures provenance of experiments and packs all the necessary files, library dependencies, and variables to reproduce the results. Reviewers can then unpack and run the experiments without having to install any additional software.

## noWorkflow

http://gems-uff.github.io/noworkflow/

noWorkflow is a tool that can transparently capture detailed provenance information from Python scripts. It is non-intrusive, does not require users to change the way they work, and provides different ways to analyze the captured provenance.
